Some frequently asked SectionEx questions.

1) How can I propagate SectionEx URLs to the entire Joomla! framework? I would like them to be generated on the FrontPage, for the Latest News module, and so on.

Riccardo Budini provided a great trick and explanation on how to achieve this. It will take you less than 5 minutes. Just check his article at: <http://www.provisum-studio.com/sectionex-urls.pdf> or <http://www.joomla.rkuster.com/propagate-urls.html>

2) My Print and PDF Icons don't work with SectionEx if SEO is enabled. How can I fix this?

Unfortunately you will have to add a few lines to the Joomla! core code. Go to "`..components/com_contentrouter.php`". There you will see the "ContentBuildRoute" function. Just add the following few lines at the beginning:

```
function ContentBuildRoute(&$query) { // ugly hack for SectionEx // the following
lines will make your PDF and Print Icons sing again :) $menus = &JSite::getMenu();
$myMenuItem = $menus->getActive(); if (isset($myMenuItem) &&
(strcmp($myMenuItem->component, "com_sectionex") == 0))
$myMenuItem->component = "com_content";
```

```
// end of SectionEx hack ... } I don't like this solution but I couldn't find anything
better that would be elegant and simple enough. If you FIND a better solution then please don't
hesitate and drop me a line.
